

Internship Report Presentation

Task2Grab – Mobile Application Development

Madhumita Sah • B.Tech CSE (AI/ML) • IILM University, Greater Noida

Intern – Web Development • Monetize Info LLP • 10 June 2026 – 10 July 2026

About Monetize Info LLP & Task2Grab

Monetize Info LLP is the organization behind **Task2Grab**, a task-based rewards platform enabling users to earn money by completing simple incentivized tasks.

Internship Objectives & Team Environment

Objectives

- Gain practical software development experience
- Understand mobile application development
- Work with API integration
- Implement reward and wallet functionality
- Learn state management
- Collaborate in a development team

Team Structure

I worked under a Team Lead who managed the overall project and assigned specific development tasks to each intern.

My Role & Contribution

Primary focus: Task listing, wallet functionality, API integration, rewards, and state management.

Wallet System

Wallet-related functionality and display

Task Listing

Displaying available tasks and dynamic data

API Integration

Connecting app features with data sources

Reward Handling

Displaying reward information to users

State Management

Managing app state for assigned features

❏ Contributed to assigned modules within the Task2Grab mobile application. Website, login, navigation, and AsyncStorage were handled by other team members.

Task Listing & API Integration

How It Works

Task data was retrieved through API integration, processed within the application, and displayed to users. Application state was maintained to support dynamically changing task information.

- Retrieved task-related data via API integration
- Processed and used available data within the app
- Maintained relevant application state
- Displayed available tasks to users
- Supported dynamically changing task information

Wallet & Reward Functionality

Worked on wallet and reward-related functionality, displaying relevant information to users through managed application state.

Wallet Display

Worked on wallet-related functionality and displayed wallet information to users

Reward Handling

Worked on reward-related functionality and displayed reward information

State Management

Used application state to manage and present reward/wallet data

Conceptual workflow for reward and wallet data flow within the application.

Technology Stack & Development Workflow

Development Workflow

Tools & Technologies

The project also used React Native dependencies including navigation, AsyncStorage, NetInfo, and other community packages — each managed by assigned team members.

React Native 0.79.5

VS Code

Git & GitHub

Android Build 35.0.0

I worked on assigned modules within the existing Task2Grab mobile application while coordinating with the Team Lead and other interns.

Challenges & Learning Outcomes

Challenges

- Working with dynamically available task data
- Understanding API integration in a live project
- Managing application state for assigned features
- Implementing wallet-related functionality
- Handling reward information display
- Coordinating module development within a team

Learning Outcomes

- Practical React Native development experience
- Hands-on API integration experience
- Understanding of application state management
- Experience with task listing and dynamic data
- Understanding wallet and reward functionality
- Improved debugging and problem-solving skills
- Git/GitHub workflow and team collaboration
- Experience working under a Team Lead

Internship Completion

Organization

Monetize Info LLP

Role

Intern – Web Development

Duration

10 June 2026 – 10 July 2026

Project

Task2Grab

During my internship, I gained practical experience in React Native development, API integration, task listing, state management, wallet functionality, reward handling, and collaborative software development.
